TAPPAN

Tappan Tough™ 10-Year Limited Warranty.

Tappan products are thoroughly inspected for quality throughout the manufacturing process. When installed with a complete registered system, Tappan coils are covered for 10 years. Our Tappan Tough™ Quality Pledge on registered Tappan split system air conditioners and heat pumps guarantees that we will replace your unit if the compressor fails in the first 10 years of ownership, when installed with a matched indoor coil or air handler. Compressor warranties also require that a new matched Tappan indoor coil is installed because the risk of failure is much greater if the compressor has to work harder because of an older, unmatched indoor coil.

It's also important to us that each homeowner understands the correct Tappan components it takes to make the most efficient and dependable comfort system for your home.

Ask your Tappan contractor or go to www.tappan.net for warranty details.

Quality, durable, energy-efficiency, value and comfort. These are the things you expect from a Tappan product, and they're exactly what you'll get with our indoor coils.

Would you ever buy a new car, and ask to have your old tires be put on it? Probably not. Similarly, when you buy a new heat pump or air conditioner, should you use your old indoor coil? Definitely not. Here's why: An old, dirty, coil designed for a less efficient product, will prevent your outdoor unit from performing at the optimum efficiency, and may even damage your new air conditioner or heat pump compressor. Also, a coil designed for a different brand has not been matched or tested with your new system so efficiency ratings and performance can also be affected.

Uncased indoor coils are used for upflow and downflow applications. The coil is encased by the ductwork during installation. A cased indoor coil is installed on top of a furnace. Cased coils are also available in horizontal configurations. A Micro-Channel coil is made of all aluminum to reduce leaks caused by formicary corrosion.
