

Westinghouse

14 & 15 SEER

*Split System Air Conditioners
and Heat Pumps*

Engineered for Quality

- More than just better indoor comfort; we want you to feel comfortable investing in a product that will perform when you need it most. Each Westinghouse air conditioner and heat pump is checked approximately 144 times during the manufacturing process then run-tested to check operation performance. In the final analysis, computer-automated testing is performed to capture operation data for future reference should your dealer ever need it.
- Westinghouse air conditioners and heat pumps are built with proven components to provide safe, clean and reliable comfort year-round. For example, our 14 SEER products offer a reliable Copeland Scroll Compressor warranted for 10 years.
- These air conditioners and heat pumps meet* the ENERGY STAR guidelines for efficiency performance. The bottom line to you is savings in your utility costs.

W

hen an air conditioner or heat pump is truly built to exacting standards of quality and durability, the manufacturer's confidence shows in its warranty.

Westinghouse products offer a 10-year warranty on all parts, and a 10-year quality pledge at no

extra cost. With our 10-year quality pledge, we will replace the entire unit should the compressor fail within the first 10 years. To learn more about our product warranties, ask your Westinghouse dealer, or visit us on the web at www.westinghousehvac.com for details.

When choosing your air conditioner or heat pump, look not only at the product, but also the service and support provided by your dealer. Westinghouse dealers receive extensive training in the installation and care of your equipment. That means your Westinghouse dealer can help you select the right air conditioner or heat pump for your home and keep it in top operating condition.

So for home comfort year after year, trust the Westinghouse brand.

* To qualify, air conditioners must have a Seasonal Energy Efficiency Ratio (SEER) rating of 14.5 or higher and heat pumps rated by a Heating Seasonal Performance Factor (HSPF) must have a rating of 8.2 or higher.

14 & 15 SEER Split System

Air Conditioners and Heat Pumps

Features & Benefits

A full metal jacket protects the coil from damage by weather and flying debris. It is finished with a Silicone-protective polyurethane coating that under goes a 950 hour salt spray test for harsher climates. It protects your unit from corrosion 50% more than standard outdoor finishes.

Engineered for reliable performance, these products offer a 10 year compressor warranty. These units are designed with the most reliable compressors. As a matter of fact, when it comes to compressor reliability, our split system products continue to be recognized for outlasting other manufacturers who use the same compressor. In fact, the compressor manufacturer reported we performed 35% better than the industry standard.

The one-piece top-design provides maximum air flow and quiet operation to increase your indoor comfort.

When a 14 SEER outdoor section is installed with an indoor section (Furnace and coil, or air handler) featuring a variable speed blower motor, you can increase the efficiency levels up to 15 SEER. To learn more about the additional benefits, ask your dealer about Westinghouse variable speed furnaces or air handlers.

If allergens, dust, mold, pet odor, dry air, temperature control etc. is a problem for you or your family members, ask your dealer how he can design a Westinghouse system to reduce common irritants, and increase comfort throughout the home for everyone.

*** Annual costs based on 36,000 Btu unit, 1500 cooling load hours, and .08/kwh. Actual costs may vary depending on climate conditions, energy rates and patterns of usage.**

Heat Pump vs. Air Conditioner

Choosing a heat pump as a comfort solution is typically driven by the climate you live in, and is relative to your comfort needs. The heat pump is designed to provide heat in the winter and is best in environments that do not drop below freezing. Your Westinghouse dealer can recommend the right choice for you, a choice that could save you money during the winter months.

A "split" system is the most common heating and cooling central system used. Your split system air conditioner or heat pump is the outdoor component of a total system. The indoor component is a matched coil, which typically sits on top of the furnace, or in warmer climates, an indoor air handler is used. When you replace your outdoor system it is extremely important to replace the indoor portion as well, in order to meet energy efficiency performance and not void important warranties. Not changing your indoor component is like buying a new car then placing old, worn tires on it.

This product uses environmentally-friendly refrigerant.

Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit www.energystar.gov.
