*Two-Stage, Fixed-Speed
Gas Furnace*

Engineered for Quality

- More than just better indoor comfort; we want you to feel comfortable investing in a product that will perform when you need it most. Each Westinghouse furnace is checked approximately 234 times during the manufacturing process then run-tested to check operation performance. In the final analysis, computer-automated testing is performed to capture operation data for future reference should your dealer ever need it.
- Westinghouse furnaces are built with proven

components to provide safe, clean and reliable comfort year-round. Our heavy-gauge aluminized steel heat exchanger provides long life and offers a limited lifetime warranty. Ask your dealer for details.

- Westinghouse furnaces feature a SmartLite® Control Board to increase the life of the igniter beyond the standard life expectancy. SmartLite learns and adapts its ignition process to the furnace as installed in your environment.

When a furnace is truly built to exacting standards of quality and durability, the manufacturer's confidence shows in its warranty.

At Westinghouse we offer a 10-year warranty on all parts and a 10-year quality pledge at no extra cost.

With our 10-year quality pledge, we will replace the entire unit should the heat exchanger fail in the first 10 years. To

When choosing a furnace, look not only at the product, but also the service and support provided by your dealer. Westinghouse dealers receive extensive training in the installation and care of your equipment. That means your Westinghouse dealer can help you select the right furnace for your home and keep it in top operating condition.

So, for home comfort year after year, trust the Westinghouse brand.

80 AFUE

Two Stage, Fixed Speed

Gas Furnace

Features & Benefits

Westinghouse Two-Stage furnaces operate at lower capacity during mild winter days, then full capacity during colder days. Because this furnace idles down to a reduced capacity it provides better comfort and performs quieter than a single-stage furnace. Longer cycles improve air circulation, minimizing temperature swings to a couple of degrees, while reducing hot and cold spots.

Increase the energy efficiency of your cooling system with Westinghouse iSEER® technology featured inside of every Westinghouse gas furnace. The energy performance of a cooling system is rated by SEER (Seasonal Energy Efficiency Ratio). The higher the SEER, the more energy efficient the product. iSEER technology can increase the energy efficiency up to one SEER during the cooling season.

Cabinet is fully insulated to shield operation sound making this furnace one of the quietest available today. Its Silicone-protective polyurethane coating resists scratching and prevents rusting to keep your furnace looking new for years to come.

Westinghouse furnaces come ready to add other Westinghouse accessories like programmable thermostats, whole-home humidifiers, air cleaners, HEPA systems and more. If allergens, dust, mold, pet odor, dry air, temperature control etc. is a problem for you or your family members, ask your dealer how he can design a Westinghouse system to reduce common irritants, and increase comfort throughout the home for everyone.

*** Dollar amounts computed at \$.092 ccf, for 2500 full-load heating hours and a system rated at 60,000 Btuh. Actual costs may vary depending on climate conditions, fuel rates, and patterns of usage according to individual lifestyle.**

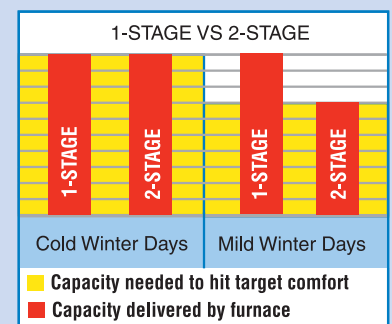

With the Westinghouse 80 AFUE Two-Stage, Gas Furnace you'll enjoy the benefits of high efficiency and better comfort.

First, let's talk about efficiency. Essentially, gas furnace efficiency is measured in AFUE ratings. That stands for Annual Fuel Utilization Efficiency. And, the AFUE rating equals the percent efficiency the unit delivers. The higher the percentage the more efficient the unit.

Our 80 AFUE Two-Stage gas furnace delivers a minimum of 80% efficient heat. Compare that to an older furnace that may deliver only 60-75% efficiency.

Our Two-stage technology enables this furnace to operate at low capacity on normal winter days, but when temperatures are more extreme it operates at higher capacity so you use only as much heat as you need. That helps keep your annual energy costs down and increases your comfort.
